

Balaji Kondasani

✉ isroindia647@gmail.com 🌐 github.com/Balaji-Kondasani

Professional Summary

Final-year Computer Science student with hands-on experience designing and developing scalable backend systems and real-time applications. Skilled in Python, Java, REST APIs, WebSockets, and database management. Built secure and production-ready automation and collaboration platforms with emphasis on performance, scalability, and system reliability. Currently exploring Generative AI and building intelligent systems that integrate large language models into real-world applications.

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering 2022–2026

Parul University

CGPA: 8.68 (as of 7th Semester)

Higher Secondary Certificate (HSC) 2022

Sri Chaitanya Educational Institutions

Percentage: 95.5%

Secondary School Certificate (SSC) 2020

Lyceum School

Percentage: 81%

Technical Skills

Programming Languages:	Python, Javascript
Database:	MySQL, MongoDB
Backend Development:	Node.js, Express.js, REST APIs
Frontend:	React.js, State Management (Zustand)
Authentication & Security:	JWT , Bcrypt
Tools & Platforms:	Git, GitHub, Postman, N8N , Automation Anywhere
Core CS:	Data Structures and Algorithms, OOPS

Projects

Coding and Collaboration Platform (Final Year Project – Solo) 2025–2026

Python, Next.js, Node.js, WebSockets

- Designed and developed a full-stack coding and collaboration platform integrating secure code execution and real-time pair programming.
- Implemented sandboxed remote code execution using third-party APIs with secure key management and user isolation.
- Built low-latency real-time collaboration using WebSockets and peer-to-peer communication with WebRTC.
- Designed scalable backend architecture combining authentication, storage, and custom real-time services.

Real-Time Chat Application (Messenger Application) 2026

React.js, Node.js, Express.js, Socket.io, MongoDB

- Engineered a full-stack real-time messaging platform using Socket.io enabling sub-second message delivery and live online/offline user status tracking.
- Implemented secure authentication using JWT stored in HTTP-Only cookies and bcrypt password hashing, ensuring protected API routes and XSS mitigation.
- Designed a modular RESTful backend architecture with controller-based organization for scalability and maintainability.
- Diagnosed and resolved production-level crashes related to environment configuration and socket race conditions, improving overall system stability.

AI Email Management Assistant 2026

React, TypeScript, Supabase, Edge Functions, OAuth 2.0

- Built a full-stack email productivity application that summarizes emails, generates contextual draft replies, and prioritizes inbox messages using server-side AI processing.

- Implemented secure OAuth 2.0 authentication with Google to access Gmail and Calendar data, managing tokens and permissions through Supabase Auth.
- Designed scalable backend logic using Supabase with real-time subscriptions and Edge Functions (Deno) to handle AI processing, reduce latency, and manage API rate limits.
- Developed a responsive frontend with React and TypeScript featuring priority filtering, real-time updates, and optimized state handling for improved user experience.

Certifications

- | | |
|---|---------------------|
| <ul style="list-style-type: none">• Introduction to Internet of Things (NPTEL – IIT Kharagpur)
Score: 88%
Validation Link: Certificate | <i>Jul–Oct 2025</i> |
| <ul style="list-style-type: none">• Programming Foundations with Python (NxtWave – CCBP 4.0)
Validation Link: Certificate | <i>Oct 2025</i> |
| <ul style="list-style-type: none">• Introduction to Databases (SQLite) (NxtWave – CCBP 4.0)
Validation Link: Certificate | <i>Oct 2025</i> |
| <ul style="list-style-type: none">• Build Your Own Dynamic Web Application (NxtWave – CCBP 4.0)
Validation Link: Certificate | <i>Nov 2025</i> |
